StudyPat-AI Assistant

Brief description of the topic with motivation, need and scope of work. *

A study assistant for students that would help them in increasing their productivity by using AI-powered tools. An AI study assistant is a software application designed to help students improve their productivity and efficiency while studying. It uses artificial intelligence tools and algorithms to provide personalized support and guidance to students. The end goal of this problem statement is to improve the productivity of the student using (but not exclusively limited to) AI-based solutions.

List of features / functionalities proposed to be implemented *

1. Posture Detection and Correction: An AI tool that can detect and correct a student's posture in real-time, helping them maintain a healthy posture while studying.
2. Study material recommendation: The AI study assistant can analyze a student's learning style, preferences, and previous performance to suggest personalized study materials, increasing the effectiveness of the study process.
3. Adaptive Learning: An AI system that can analyze a student's learning pace, strengths, and weaknesses, and adapt to their individual needs, providing personalized content and exercises.
4. Time Management: An AI tool that can help students plan their time more effectively by identifying the most important tasks, prioritizing them, and allocating time more efficiently.
5. An attractive and soothing frontend which will motivate student to study and encourage them to study for longer hours.
6. A platform which provides the student with all the necessary tools to help him study such that they never need to leave the platform which will help in avoiding distractions.
